

EXAM DATE: May-16-2012

Inland Imaging South Cowley - Magnetic Resonance Imaging

The soft tissues are unremarkable in appearance.

IMPRESSION:

1. Mild to moderate posterior disc bulges with small annular fissures and L3-L4 and L4-L5 are demonstrated with mild canal stenosis at both these levels. There is mild bilateral foraminal stenosis at both these levels with left greater than right subarticular recess stenosis at L4-L5.
2. Left-sided laminectomy postsurgical changes are demonstrated at L5-S1 without canal stenosis. There is mild to moderate left-sided and mild right-sided foraminal stenosis.
