ANESTHESIA: General with local anesthetic.

ESTIMATED BLOOD LOSS: 25 cc.

FLUIDS: 1000 cc of crystalloid solution.

DRAINS: None.

COMPLICATIONS: None.

SPECIMEN: None.

HISTORY: The patient is a 53-year-old Caucasian female who is referred to my practice by her chiropractor, I do not know who, due to chronic recurrent left proximal tib-fib dislocation. She had been dealing with this for the past several years and was having problems with continuous pain involving the proximal tib-fib syndesmosis. She had undergone numerous evaluations in the past with no improvement in her symptomatology. She tried bracing, physical therapy, activity modification, and chiropractic treatments with no improvement. She had undergone multiple studies including x-rays, MRIs, femoral scanning, and clinical examinations with no improvement. She had sought my care regarding her proximal recurrent chronic tib-fib
